Windows installation instructions download file installation .exe from anyDesk web pages download page, run it and install optinally AnyDesk as a macOS service download file installation .dmg from the AnyDesk web pages download page, run it and install optinally AnyDesk as an iOS and Android app store access for the platform, or play store or app store and install the app directly. FreeBSD download file .tar.gz AnyDesk web pages, content extraction and running binary Linux for Debian and red hat compatible with Linux distribution we highly recommend to use The AnyDesk Linux repository described below, for other distributions of .tar.gz file with can be downloaded from anyDesk linux repository web pages and the recommended installation of how to install AnyDesk on Debian and Red Hat is compatible with Linux distribution using the official AnyDesk repository that offers the latest version Stable Download: For specific repository positions with older versions of AnyDesk (after v5) are also available: note: All commands from the above howto instructions should be run as root user. Latest AnyDesk for Linux Support 6 and older versions of Debian/Ubuntu v5.0.0 and are available for download (including the previous version) here for other AnyDesk distributions are also provided in the .tar.gz archive available for download in the download area of the AnyDesk web page, however the facility is not officially supported. Please follow a README file in your archive to detailed information. Dependencies required to Linux: libc6 (>= 2.7), libgcc1 (>= 1.4.1.1), libglib2.0-0 (>= 2.16.0), libgtk2.0-0 (>= 2.20.1), libstdc++6 (>= 4.1.1), libx11-6, libxcb-shm0, libxcb1, libpango1.0-0, libcairo2, libxrandr2 (>= 1.3), libx11-xcb1, libxtst6, libfixes3, libxdamage1 and libgtkglext1. we use cookies . You can opt out and disable them in our cookie settings. Look at our privacy policy for more information. OK Terminal Server, Terminal session, Terminal session dialogue, when requesting a AnyDesk session on Windows Server having multiple Windows sessions. List of supported Windows servers: Installing there are four options to connect to Windows Server: ID connects to the server, causing a dialog to select a user (Windows account) or console to connect to. ID/ connects to the console. If no user is signed in, LoginScreen will be displayed. Id/User connects to the specified user. This can also be the console session. If the session is not console, an RDP session should also be created at this stage to restore an image. ID/Domain/User connects to the specified user in the domain. If option three fails caused by duplicate usernames, this is the solution. Note: If you want to connect to an individual terminal meeting, a user must enter that terminal session. Therefore, an RDP session must be created before creating in order to get the image. The performance of some servers is rather low-end graphical hardware. If the connection to your server shows poor graphics performance, install mirror drivers to increase performance. AnyDesk is the world's fastest most convenient remote desktop application. Access all your apps, documents and files from anywhere, without having to cede your data to a cloud service. All you need to do to get started is to download and launch the 1.1MB program file. No installation or (network-) configuration required. Fixed longer durations over more number boundaries. 6.0.8 November 20th, 2020 6.0.7 July 28, 2020 6.0.6 July 22, 2020 6.0.5 July 14, 2020 5.5.3 April 15, 2020 5.4.2 March 19, 2020 4.0 April 19, 2018 3.7.0 January 11, 2018 3.5.0 August 10, 2017 3.4.1 July 2017 2.6.1 October 27, 2016 2.5.0 September 22, 2016 2.3.5 August 16, 2016 2.3.4 August 2, 2016 2.3.0 May 3, 2016 2.2.0 February 26, 20 16 2.1.1. 1 October 23, 2015 2.0 July 1, 2015 1.3.0 Beta April 8, 2015 1.2.2 Beta January 26, 2015 AnyDesk is the fastest comfortable remote desktop app in the world. Access all your apps, documents and files from anywhere, without having to cede your data to a cloud service. All you have to do to get started is... And launch the 1.1MB program file. No installation or (network-) configuration required. What's new in this release: Fixed the duration over the integer boundaries. What's new in version 4.2.3: Added a setting to reject direct connections (punch holes). Default allowed. Auto-connect the fixed in the Remote Reboot feature. Fixed a rare accident that can occur in incoming sessions. In some situations (e.g. virtual machines), no image was displayed by ddraw vision. In this case, AnyDesk now uses gdi and displays an image. The standard AnyDesk distribution did not start when an MSI version previously installed was not removed from AnyDesk correctly. What's new is fixed in version 4.2.2: Bugs: Aliases can't sign up for '@ad' Apan. Other changes: In successful nickname registration a hint is shown, that the user has to take care of their nickname and ID on their own. What's new in version 3.7.0. Security change: Fix a bug where permissions can be reset during the session. In some cases the main window of AnyDesk was not rendered correctly in Windows 10 (show transparent areas). What's new in version 3.6.3: Fixed the crash when terminating AnyDesk using the tray icon while the sessions were running. In rare circumstances, connecting to Windows 10 did not show any images/a black image. Let the clipboard work again. If settings are disabled, it is impossible to change the license key. Sas fix (Ctrl+Alt+Del) that does not work under some conditions in Windows Vista and upwards. On some Windows 10 systems, AnyDesk didn't work when the monitor was spinning. On these systems, AnyDesk now has to pass monitor content as usual. Fixed two rarely occurs falling in close address books. What is new is in version 3.6.1: Important security updates, dll injection vulnerabilities fixed. What's new is in version 3.5.0: New features: The remote reboot feature now even works when AnyDesk is not installed. Please note: You need to apply the height of the remote user before using the Restart feature in this case. Custom AnyDesk: Text and title ID and group connection (main window) can now be customized. Custom AnyDesk: Before launching the disclaimer frontend can be shown now, which can be accepted and cancelled in the custom logo, title, text, background color and text on the buttons. It will only be shown if AnyDesk is not installed and the text contains non-white space. All other settings are optional. Custom AnyDesk: Added support for environmental variables on the track. Fixed bugs: In the D3D menu all-screen keyboard mode is always set to 'Translate'. The invitation link is not shown in the main window after switching to advanced visibility and returning. Fixed crash in opening chat log in backend after close session. The crash was fixed when the session information panel was closed before displaying the remote data. What's new in version 3.2.5: Fixed crash after remote reboot. Fixed the bug in the Feature Availability Indicator in Fix a bug in the address book that did not allow adding an item from speed dial to address book feature that allows online management of computers. Address Book allows you to label and sort items in groups. You need permission in order to use this new feature. Improve speed dialing with advanced mode. Speed Dial now filters previous connections onto the user's input. Speed dial and address book now show the online status of the computer - Red: Offline, Green: Online, Gray: Unknown Favorite Implementation on Speed Dial. These will also affect Windows' jump list. The Reception window now shows remote incoming sessions on tabs instead of separate windows. The reception window will now remain open until it is closed by the user so that fans leave the chat message after giving remote support. Improve chat visibility. Session settings are now saved and restored when connecting to the same remote computer again. The custom client (exe and msi file) can now embed the license key for easy deployment. Fix a clipboard file copy bug when the user connects to a newly started Windows machine on the logon screen and then inserted onto a user. New interface design. Updated localizations. Quotes added to the service path. What's new is in version 2.6.0: Enable/disable audio works already receiving connection window restrictions was fixed what's new in version 2.2.2.0: improved request height feature. It is now possible to transfer credentials for an administrator user if the remote user has limited user rights and is not currently managing credentials. In addition, the feature now supports user switching (quick user switch) after height has succeeded. Fixed the bug in automatic remote keyboard keyboard detection. Fixed rare forms that can lead to AnyDesk being able to reconnect after a while. Improve the mechanism of the clipboard. This should solve problems with the clipboard. What's new in version 1.1.5: The port used for external connections can now be configured. Configuration.
